

EXPLOSION OF HYDROGEN-COOLED GENERATORS.

ADDITIONAL COVERAGE

The insurance shall be extended to cover damage caused to the turbo-generators listed in the Specification of the Policy due to explosion of the refrigerating agent, with damage caused by fire being expressly excluded.

Definition.

Explosion caused by refrigerating agent shall be understood as a sudden and unforeseen reaction of hydrogen in the machine insured. This leads to an increase in pressure in the machine that, on attempting to achieve a balance with outside pressure, leads to destruction of the equipment or the parts thereof.

The Insured shall always pay the deductible established in the specification of the Policy.
